System Test Report

1. Overview

Explore the website under test (https://ecommerce-playground.lambdatest.io/index.php?route=common/home) and, on that basis, provide a summary of the website, including its high-level business goals, user roles, and features.

2. System Functions

List the functions that you decide to test, together with their descriptions and web locations (URLs). The table below provides examples for reference.

Function ID	Function Name	Description and location
F1	*User Login*	*A returning user can log in to the website using the registered email address and password via the login page. https://ecommerce-playground.lambdatest.io/index.php?route=account/login*
F2	*User Registration*	*A user can register an account using a new email address that has not previously been registered on the website, together with personal details (full name and telephone number) and a password. https://ecommerce-playground.lambdatest.io/index.php?route=account/register*
F3		
F4		

Explain the dependencies between the functions that you decide to test. You may use a graph to illustrate the dependency relationships between the functions under test.

3. Test Team

Provide the full names, email addresses, subject and tutorial codes of all your team members.

Describe the roles and responsibilities of your group members. Make sure that all functions listed in Section 2 are covered.

The table below shows an example for your reference.

Student ID	Member Name	Role	Responsibilities (in terms of Function IDs/Names)
12345678	*Jane Doe*	*Team Leader*	• *F1 User Login* • *F2 XXXX* • *F6 XXXXXXX*

Indicate whether your group has already delivered (or wishes to deliver) an in-class presentation or submit a recorded presentation.

- *For an in-class presentation, please indicate which tutorial your group attended (or wishes to attend).*
- *For a recorded presentation, please provide a web link through which your marker can access the recording.*

4. Task Schedule

*Describe the order in which you will test the functions selected in Section 2, either for the whole group or for each member separately. Each function to be tested is considered a **testing task**. The schedule should be presented using a Gantt chart.*

Does the order of your testing tasks support parallel testing among team members? If so, explain how. If not, explain how you could improve the schedule to allow members to conduct their testing tasks in parallel.

Make sure that you test a function before proceeding to test any function that depends on it. For example, you need to test the "User Registration" function first and make sure that it is working before you can test the "User Login" function.

Make sure to cover all team members (see Section 3) and all functions (see Section 2).

5. Test Environments and Tools

Describe your computing platforms (Arm, x86), operating systems (macOS, Linux, Windows), and how you set up your testing environments (programming languages, test automation tools, libraries, code editors, and IDEs), step by step.

If your group members use different environment configurations or tools, describe each member's environment and tools separately.

6. Test Cases

Each group member should complete three test cases – each corresponding to a function to be tested (in Section 2).

The table below shows a sample template for a test case. You need one table for each test case.

If your tests have any source code, please provide the source code; if you used any prompts, describe them as well.

Examples of test scenarios and steps can be found on page 20 or page 25 of the Tutorial 9 slides, or in feature files (if you use the Gherkin language; see, for example, page 10 of the Tutorial 10 slides).

Test Case ID	*Define a unique id for the test case (e.g., T001)*	
Function IDs/Names	*Refer to the table in Section 2*	
Tester	*Name of the team member who completed this test*	
Test Scenario 1	***Step #***	***Test Action***
	1	*Describe the action to be taken, including the user behaviour, the data to be entered, and the URL.*
	2	
	3	
	4	
	5	

	6	
	7	
	8	
	9	
		Add or reduce steps as you need.
Test Scenario 2	***Step #***	***Test Action***
	1	*Describe the action to be taken, including the user behaviour, the data to be entered, and the URL.*
	2	
	3	
	4	
	5	
	6	
	7	
	8	
	9	
		Add or reduce steps as you need.
Test Scenario 3	***Step #***	***Test Action***
	1	*Describe the action to be taken, including the user behaviour, the data to be entered, and the URL.*
	2	
	3	
	4	
	5	
	6	
	7	
	8	
	9	
		Add or reduce steps as you need.
Test Results	*Describe your test results of each test scenario. Provide screenshots wherever possible to demonstrate how the tests proceeded and the results obtained (pass, fail, or error).*	

7. Analysis and Reflections

Provide basic statistics for the tests conducted by your group, including how many passed, failed, or resulted in errors. List any defects that you identified on the website.

Reflect on the tests you have conducted and identify the successes and failures in your group's efforts.

What lessons did you learn? How would you approach the system testing tasks differently if given a second chance?
